**Total marks — 80**

**SECTION 1 — 20 marks**

Attempt ALL questions.

Instructions for the completion of Section 1 are given on Page two.

**SECTION 2 — 60 marks**

Attempt ALL questions in this section.

Write your answers clearly in the spaces provided in this booklet. Additional space for answers and rough work is provided at the end of this booklet. If you use this space you must clearly identify the question number you are attempting. Any rough work must be written in this booklet. You should score through your rough work when you have written your final copy.

Use blue or black ink.

Before leaving the examination room you must give this booklet to the Invigilator; if you do not, you may lose all the marks for this paper.

\* X 7 0 7 7 5 0 1 0 1 \*

SECTION 1— 20 marks

The questions for Section 1 are contained in the question paper X707/75/02.  
Read these and record your answers on the answer grid on *Page three* opposite.  
Use **blue** or **black** ink. Do NOT use gel pens or pencil.

1. The answer to each question is **either** A, B, C or D. Decide what your answer is, then fill in the appropriate bubble (see sample question below).
2. There is **only one correct** answer to each question.
3. Any rough working should be done on the additional space for answers and rough work at the end of this booklet.

**Sample Question**

The thigh bone is called the

- A humerus
- B femur
- C tibia
- D fibula.

The correct answer is **B**—femur. The answer **B** bubble has been clearly filled in (see below).

<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

**Changing an answer**

If you decide to change your answer, cancel your first answer by putting a cross through it (see below) and fill in the answer you want. The answer below has been changed to **D**.

<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

If you then decide to change back to an answer you have already scored out, put a tick (✓) to the **right** of the answer you want, as shown below:

<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>	or	<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>
<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>		<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

SECTION 1 — Answer Grid

	A	B	C	D
1	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

\* X 7 0 7 7 5 0 1 0 5 \*

2. (a) Shells can be removed from eggs by dissolving them in vinegar for 2–3 days. The egg contents remain inside a thin membrane.

In an investigation the shells from two eggs were removed. The eggs were then weighed and placed in beakers as shown below.

After 2 hours the eggs were removed from the beakers, blotted dry and reweighed. The results are shown in the following table.

<i>Beaker</i>	<i>Mass at start (g)</i>	<i>Mass after 2 hours (g)</i>	<i>Percentage change in mass</i>
A	54.0	67.5	
B	52.1	47.8	-8.2

- (i) Complete the table by calculating the percentage change in mass for beaker A. 1

*Space for calculation*

- (ii) Suggest why the eggs were blotted dry before being reweighed. 1

---

---

2. (a) (continued)

(iii) Choose either beaker A or B and explain how osmosis caused the change in mass of the eggs in that beaker.

2

3. (a) DNA is a double stranded molecule. The following diagram shows part of one strand. Complete the diagram to show the complementary strand.

1

- (b) (i) DNA contains genetic material which controls the synthesis of chemicals made from amino acids.  
Name the type of chemicals synthesised.

1

\_\_\_\_\_

- (ii) The diagram below shows an example of one of these chemicals being synthesised.

Name molecule P and describe how it determines the sequence of amino acids, represented by AA, as shown in the diagram.

2

Molecule P \_\_\_\_\_

Description \_\_\_\_\_

\_\_\_\_\_

- (iii) Name the part of the cell where molecule P was made.

1

\_\_\_\_\_

4. Photosynthesis is a two stage process used by green plants to produce food.

(a) The diagram below represents a summary of the first stage of photosynthesis.

Complete the diagram by filling in the three boxes, selecting terms from the list in the box below.

3

- |       |                |                 |
|-------|----------------|-----------------|
| ATP   | carbon dioxide | carbon fixation |
| sugar | hydrogen       | oxygen          |
|       |                | light reactions |

Name of the first stage  
\_\_\_\_\_

Two products used in second stage.  
1. \_\_\_\_\_  
2. \_\_\_\_\_

Diffuses out of the leaf  
\_\_\_\_\_

(b) Describe the second stage of photosynthesis.

\_\_\_\_\_  
\_\_\_\_\_

6. The diagram below shows the neurons involved in a reflex action. Neurons J, K and L form a reflex arc.

(a) Describe how information is passed along a neuron. 1

\_\_\_\_\_

(b) Select **one** of the neurons shown in the diagram and tick (✓) the appropriate box below.

Name that type of neuron and describe its particular function. 2

J       K       L

Name \_\_\_\_\_

Function \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

(c) During a reflex action, the speed at which the information flows was measured to be 90 metres per second.

Calculate how long it would take for the information to complete a reflex arc which was 0.9 m in length. 1

*Space for calculation*

\_\_\_\_\_ seconds

7. (a) One type of deafness in humans is caused by a single gene.  
 The diagram below shows the pattern of inheritance in one family.  
 H represents the hearing form of the gene.  
 h represents the non-hearing form of the gene.

- (i) Using Jon as an example, explain how it is known that the hearing form of the gene is dominant. 1

---

---

- (ii) Use information in the family tree to complete the following table to show the genotype and phenotype of each individual. 2

<i>Individual</i>	<i>Genotype</i>	<i>Phenotype</i>
Paul		
Lyall		

- (iii) Fiona has a child with a man who has the same genotype as her. State the chance of their child being able to hear. 1

8. (a) An experiment was set up to find out the optimum temperature for the growth of tomatoes in a glasshouse. The following table gives the results of this experiment.

Temperature (°C)	Fresh mass of tomatoes (g/plant)	Dry mass of tomatoes (g/plant)
14	1000	50
18	8300	415
22	9000	450
26	2200	110
32	1600	80

- (i) On the grid below, complete the vertical axis and plot a line graph to show the effect of temperature on the dry mass of tomatoes. (Additional graph paper, if required, can be found on Page twenty-three)

2

8. (a) (continued)

(ii) Above 26 °C the drop in the fresh mass of tomatoes continues at a steady rate.

Using the information in the table, predict the fresh mass of tomatoes which will be produced at 35 °C.

9. The diagrams below represent part of the human breathing system.

(a) (i) Name the structure labelled W. 1

\_\_\_\_\_

(ii) Describe **two** features of these structures which improve the efficiency of gas exchange. 2

1 \_\_\_\_\_

2 \_\_\_\_\_

(b) Mucus and cilia are found in the trachea.

Describe how the mucus and cilia work together to help prevent bacteria getting into the lungs. 2

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

10. Nitrogen is an important element in living organisms. The diagram below shows stages in the transfer of nitrogen in an ecosystem.

(a) The numbers in the diagram above represent stages in the transfer of nitrogen in an ecosystem.

Select the correct number(s) to complete the table below to identify the named stages.

2

Stage	Number
Death and decay	
Denitrification	

(b) Nitrogen fixing bacteria are involved in stage 1.

State **one** place where these microorganisms can be found.

1

\_\_\_\_\_

(c) Identify chemical R and explain its importance to plants.

2

Chemical R \_\_\_\_\_

Importance to plants \_\_\_\_\_

\_\_\_\_\_

11. A river was sampled at five sites as shown in the diagram below.

The following tables show the results of analysing the samples at each site.

Table 1

Site	Oxygen levels (Units)	Number of bacteria per 100ml
1	1.2	500
2	0.04	150 000
3	0.40	12 680
4	0.54	3 400
5	1.12	1 250

Table 2

Organism Present	Site 1	Site 2	Site 3	Site 4	Site 5
Mayfly nymphs	23	0	0	0	8
Stonefly nymphs	42	0	0	0	21
Caddis fly larvae	18	0	0	10	15
Fresh water shrimp	2	0	0	1	1
Blood worms	1	5	24	7	1
Sludge worms	1	67	43	9	0

11. (continued)

- (a) (i) Using data from Table 1, describe the relationship between the number of bacteria and the oxygen level in the water. 1

---

---

- (ii) Methylene blue is a chemical which can be used to compare oxygen levels in the water. The lower the oxygen level, the faster methylene blue changes from blue to colourless.  
 A sample of water from each of the five sites was tested.  
 Predict which sample would lose its blue colour fastest. 1

Sample from site number \_\_\_\_\_

- (b) Use data from Tables 1 and 2 to answer the following questions.  
 (i) State which of the organisms in the samples would be found in areas of high oxygen content. 1

---

- (ii) Sewage in the river is a form of water pollution.  
 Describe the effect this pollution has on the number of different types of organisms in this river. 1

---

---

- (c) Some species are known as indicator species.  
 Explain what is meant by indicator species. 1

12. Ivy is a climbing plant which produces stems that grow vertically up trees and walls. It can also produce horizontal stems allowing the ivy to spread out along the ground.

Variation is shown in the width of the leaves of the ivy plant.

A group of students carried out an investigation to find out if the difference in leaf width is linked to the height of the leaves from the ground.

Five leaves were collected from a horizontal stem and another five from a vertical stem. The widths of the leaves were measured and the results are shown in the table below.

<i>leaf</i>	<i>Leaf width (mm)</i>	
	<i>Horizontal stem</i>	<i>Vertical stem</i>
1	52	32
2	60	34
3	56	35
4	50	44
5	52	35
average	54	

- (a) Complete the table by calculating the average width of the leaves from the vertical stem.

1

*Space for calculation*

12. (continued)

(b) State the type of variation shown by leaf width. 1

\_\_\_\_\_

(c) The results show that leaves from a horizontal stem are bigger than leaves from a vertical stem.  
Give a reason why these results might not be reliable. 1

\_\_\_\_\_  
\_\_\_\_\_

(d) To make the investigation valid, all leaves were taken from the same plant.  
Explain why this was necessary. 1

\_\_\_\_\_  
\_\_\_\_\_

(e) The students wanted to find out what abiotic factors may have affected the width of the leaves from that plant.  
Suggest one abiotic factor which they could have investigated. 1

\_\_\_\_\_

[Turn over

13. Researchers have discovered an advantageous genetic mutation that causes high bone density in humans.

One man in the USA was discovered to possess this mutation after he walked away without injury from a serious car crash. Further studies have found several members of the same extended family with this mutation.

20 members of the family provided blood samples for DNA and biochemical testing. 7 of them were found to have high bone density. The same tests were performed on another group of 20 unrelated individuals with normal bone density.

The location of the gene mutation was able to be identified and it is hoped that the findings will help in developing medications to increase bone density for the treatment of conditions such as osteoporosis.

(a) (i) Calculate the percentage of the family who did **not** have the mutation for high bone density. 1

*Space for calculation*

\_\_\_\_\_ %

(ii) Explain why the biochemical tests were also performed on the 20 individuals with normal bone density. 1

---

---

(b) Name **one** factor which can increase the rate of mutation. 1

---

(c) Mutations are the only source of new alleles. Explain why it is important that new alleles arise in a species. 1
